SHIPMENTS OF PREPARED STOCK AND POULTRY FEEDS

The information presented in this report is arranged as follows:

Table 1. Shipments of Stock and Poultry Feeds:

The estimated shipments of premixes and concentrates, complete and other feeds, as given in columns 1, 2, 3, 4, and 5 are derived from analysis presented in Tables 2, 3, 4 and 5 following. The basis for this shipments detail is further explained in these respective sections. The purpose of Table 1 is to provide industry and other interested persons with anticipated trends in the manufactured Feeds field.

Table 2. Shipments of Premixes and Concentrates:

These are the average shipments of premixes and concentrated feeds, by type and geographical destination, as reported monthly by primary manufacturers direct to the Bureau. They include premixes and concentrates moving into the hands of secondary or franchise operators (if any) as well as similar commodities moving direct to the farm level.

Table 3. Estimated Feed Potential from Premixes and Concentrated Feeds:

The data in this table represents the total finished feed equivalent available from the volume of premixes and concentrated feeds reported by manufactures in Table 2. The estimate of potential feeds has been supplied by reporting establishments and eliminates the use of factors as previously employed by the Bureau. The resulting estimate should prove more useful since reported data will readily reflect the change in industry activity.

Table 4. Shipments of Secondary or Complete Feeds:

The detail of feeds in this section represent the total secondary or finished feeds manufactured from raw ingredients (as opposed to those which use premixes or concentrates). This data is also reported directly by manufacturers of such products and is provided geographically by destination. The total volume of complete or finished feed is provided in Table 1, Section "B". However, provincial volumes may also be determined by the addition of volumes available in Table 3 and 4.

Table 5. Shipments of Other Animal Feeds:

With the exception of scratch grain feeds and chopped ground or crushed grain feeds, all commodities are tabulated as reported by manufactures. Shipments of scratch grain feed and chopped ground or crushed grain feeds are collected from a sample group of manufacturers and these have been extended to represent total coverage.

Table 6. Production, Shipments, Inventories and Imports of Dehydrated Alfalfa, Clover and Grass Meals:

The production and shipments recorded in this table are compiled from information received from operators of Dehydrated Alfalfa Meal plants in Canada, (see page 25 of this report for the list of contributors).

Imports are compiled by the External Trade Division from custom invoices and are the latest available.

SHIPMENTS OF PREPARED STOCK AND POULTRY FEEDS

The information presented in this report is arranged as follows:

Table 1. Shipments of Stock and Poultry Feeds:

The estimated shipments of premixes and concentrates, complete and other feeds, as given in columns 1, 2, 3, 4, and 5 are derived from analysis presented in Tables 2, 3, 4 and 5 following. The basis for this shipments detail is further explained in these respective sections. The purpose of Table 1 is to provide industry and other interested persons with anticipated trends in the manufactured Feeds field.

Table 2. Shipments of Premixes and Concentrates:

These are the average shipments of premixes and concentrated feeds, by type and geographical destination, as reported monthly by primary manufacturers direct to the Bureau. They include premixes and concentrates moving into the hands of secondary or franchise operators (if any) as well as similar commodities moving direct to the farm level.

Table 3. Estimated Feed Potential from Premixes and Concentrated Feeds:

The data in this table represents the total finished feed equivalent available from the volume of premixes and concentrated feeds reported by manufactures in Table 2. The estimate of potential feeds has been supplied by reporting establishments and eliminates the use of factors as previously employed by the Bureau. The resulting estimate should prove more useful since reported data will readily reflect the change in industry activity.

Table 4. Shipments of Secondary or Complete Feeds:

The detail of feeds in this section represent the total secondary or finished feeds manufactured from raw ingredients (as opposed to those which use premixes or concentrates). This data is also reported directly by manufacturers of such products and is provided geographically by destination. The total volume of complete or finished feed is provided in Table 1, Section "B". However, provincial volumes may also be determined by the addition of volumes available in Table 3 and 4.

Table 5. Shipments of Other Animal Feeds:

With the exception of scratch grain feeds and chopped ground or crushed grain feeds, all commodities are tabulated as reported by manufactures. Shipments of scratch grain feed and chopped ground or crushed grain feeds are collected from a sample group of manufacturers and these have been extended to represent total coverage.

Table 6. Production, Shipments, Inventories and Imports of Dehydrated Alfalfa, Clover and Grass Meals:

The production and shipments recorded in this table are compiled from information received from operators of Dehydrated Alfalfa Meal plants in Canada, (see page 25 of this report for the list of contributors).

Imports are compiled by the External Trade Division from custom invoices and are the latest available.

SHIPMENTS OF PREPARED STOCK AND POULTRY FEEDS

The information presented in this report is arranged as follows:

Table 1. Shipments of Stock and Poultry Feeds:

The estimated shipments of premixes and concentrates, complete and other feeds, as given in columns 1, 2, 3, 4, and 5 are derived from analysis presented in Tables 2, 3, 4 and 5 following. The basis for this shipments detail is further explained in these respective sections. The purpose of Table 1 is to provide industry and other interested persons with anticipated trends in the manufactured Feeds field.

Table 2. Shipments of Premixes and Concentrates:

These are the average shipments of premixes and concentrated feeds, by type and geographical destination, as reported monthly by primary manufacturers direct to the Bureau. They include premixes and concentrates moving into the hands of secondary or franchise operators (if any) as well as similar commodities moving direct to the farm level.

Table 3. Estimated Feed Potential from Premixes and Concentrated Feeds:

The data in this table represents the total finished feed equivalent available from the volume of premixes and concentrated feeds reported by manufactures in Table 2. The estimate of potential feeds has been supplied by reporting establishments and eliminates the use of factors as previously employed by the Bureau. The resulting estimate should prove more useful since reported data will readily reflect the change in industry activity.

Table 4. Shipments of Secondary or Complete Feeds:

The detail of feeds in this section represent the total secondary or finished feeds manufactured from raw ingredients (as opposed to those which use premixes or concentrates). This data is also reported directly by manufacturers of such products and is provided geographically by destination. The total volume of complete or finished feed is provided in Table 1, Section "B". However, provincial volumes may also be determined by the addition of volumes available in Table 3 and 4.

Table 5. Shipments of Other Animal Feeds:

With the exception of scratch grain feeds and chopped ground or crushed grain feeds, all commodities are tabulated as reported by manufactures. Shipments of scratch grain feed and chopped ground or crushed grain feeds are collected from a sample group of manufacturers and these have been extended to represent total coverage.

Table 6. Production, Shipments, Inventories and Imports of Dehydrated Alfalfa, Clover and Grass Meals:

The production and shipments recorded in this table are compiled from information received from operators of Dehydrated Alfalfa Meal plants in Canada, (see page 25 of this report for the list of contributors).

Imports are compiled by the External Trade Division from custom invoices and are the latest available.

SHIPMENTS OF PREPARED STOCK AND POULTRY FEEDS

The information presented in this report is arranged as follows:

Table 1. Shipments of Stock and Poultry Feeds:

The estimated shipments of premixes and concentrates, complete and other feeds, as given in columns 1, 2, 3, 4, and 5 are derived from analysis presented in Tables 2, 3, 4 and 5 following. The basis for this shipments detail is further explained in these respective sections. The purpose of Table 1 is to provide industry and other interested persons with anticipated trends in the manufactured Feeds field.

Table 2. Shipments of Premixes and Concentrates:

These are the average shipments of premixes and concentrated feeds, by type and geographical destination, as reported monthly by primary manufacturers direct to the Bureau. They include premixes and concentrates moving into the hands of secondary or franchise operators (if any) as well as similar commodities moving direct to the farm level.

Table 3. Estimated Feed Potential from Premixes and Concentrated Feeds:

The data in this table represents the total finished feed equivalent available from the volume of premixes and concentrated feeds reported by manufactures in Table 2. The estimate of potential feeds has been supplied by reporting establishments and eliminates the use of factors as previously employed by the Bureau. The resulting estimate should prove more useful since reported data will readily reflect the change in industry activity.

Table 4. Shipments of Secondary or Complete Feeds:

The detail of feeds in this section represent the total secondary or finished feeds manufactured from raw ingredients (as opposed to those which use premixes or concentrates). This data is also reported directly by manufacturers of such products and is provided geographically by destination. The total volume of complete or finished feed is provided in Table 1, Section "B". However, provincial volumes may also be determined by the addition of volumes available in Table 3 and 4.

Table 5. Shipments of Other Animal Feeds:

With the exception of scratch grain feeds and chopped ground or crushed grain feeds, all commodities are tabulated as reported by manufactures. Shipments of scratch grain feed and chopped ground or crushed grain feeds are collected from a sample group of manufacturers and these have been extended to represent total coverage.

Table 6. Production, Shipments, Inventories and Imports of Dehydrated Alfalfa, Clover and Grass Meals:

The production and shipments recorded in this table are compiled from information received from operators of Dehydrated Alfalfa Meal plants in Canada, (see page 25 of this report for the list of contributors).

Imports are compiled by the External Trade Division from custom invoices and are the latest available.

SHIPMENTS OF PREPARED STOCK AND POULTRY FEEDS

The information presented in this report is arranged as follows:

Table 1. Shipments of Stock and Poultry Feeds:

The estimated shipments of premixes and concentrates, complete and other feeds, as given in columns 1, 2, 3, 4, and 5 are derived from analysis presented in Tables 2, 3, 4 and 5 following. The basis for this shipments detail is further explained in these respective sections. The purpose of Table 1 is to provide industry and other interested persons with anticipated trends in the manufactured Feeds field.

Table 2. Shipments of Premixes and Concentrates:

These are the average shipments of premixes and concentrated feeds, by type and geographical destination, as reported monthly by primary manufacturers direct to the Bureau. They include premixes and concentrates moving into the hands of secondary or franchise operators (if any) as well as similar commodities moving direct to the farm level.

Table 3. Estimated Feed Potential from Premixes and Concentrated Feeds:

The data in this table represents the total finished feed equivalent available from the volume of premixes and concentrated feeds reported by manufactures in Table 2. The estimate of potential feeds has been supplied by reporting establishments and eliminates the use of factors as previously employed by the Bureau. The resulting estimate should prove more useful since reported data will readily reflect the change in industry activity.

Table 4. Shipments of Secondary or Complete Feeds:

The detail of feeds in this section represent the total secondary or finished feeds manufactured from raw ingredients (as opposed to those which use premixes or concentrates). This data is also reported directly by manufacturers of such products and is provided geographically by destination. The total volume of complete or finished feed is provided in Table 1, Section "B". However, provincial volumes may also be determined by the addition of volumes available in Table 3 and 4.

Table 5. Shipments of Other Animal Feeds:

With the exception of scratch grain feeds and chopped ground or crushed grain feeds, all commodities are tabulated as reported by manufactures. Shipments of scratch grain feed and chopped ground or crushed grain feeds are collected from a sample group of manufacturers and these have been extended to represent total coverage.

Table 6. Production, Shipments, Inventories and Imports of Dehydrated Alfalfa, Clover and Grass Meals:

The production and shipments recorded in this table are compiled from information received from operators of Dehydrated Alfalfa Meal plants in Canada, (see page 25 of this report for the list of contributors).

Imports are compiled by the External Trade Division from custom invoices and are the latest available.

SHIPMENTS OF PREPARED STOCK AND POULTRY FEEDS

The information presented in this report is arranged as follows:

Table 1. Shipments of Stock and Poultry Feeds:

The estimated shipments of premixes and concentrates, complete and other feeds, as given in columns 1, 2, 3, 4, and 5 are derived from analysis presented in Tables 2, 3, 4 and 5 following. The basis for this shipments detail is further explained in these respective sections. The purpose of Table 1 is to provide industry and other interested persons with anticipated trends in the manufactured Feeds field.

Table 2. Shipments of Premixes and Concentrates:

These are the average shipments of premixes and concentrated feeds, by type and geographical destination, as reported monthly by primary manufacturers direct to the Bureau. They include premixes and concentrates moving into the hands of secondary or franchise operators (if any) as well as similar commodities moving direct to the farm level.

Table 3. Estimated Feed Potential from Premixes and Concentrated Feeds:

The data in this table represents the total finished feed equivalent available from the volume of premixes and concentrated feeds reported by manufactures in Table 2. The estimate of potential feeds has been supplied by reporting establishments and eliminates the use of factors as previously employed by the Bureau. The resulting estimate should prove more useful since reported data will readily reflect the change in industry activity.

Table 4. Shipments of Secondary or Complete Feeds:

The detail of feeds in this section represent the total secondary or finished feeds manufactured from raw ingredients (as opposed to those which use premixes or concentrates). This data is also reported directly by manufacturers of such products and is provided geographically by destination. The total volume of complete or finished feed is provided in Table 1, Section "B". However, provincial volumes may also be determined by the addition of volumes available in Table 3 and 4.

Table 5. Shipments of Other Animal Feeds:

With the exception of scratch grain feeds and chopped ground or crushed grain feeds, all commodities are tabulated as reported by manufactures. Shipments of scratch grain feed and chopped ground or crushed grain feeds are collected from a sample group of manufacturers and these have been extended to represent total coverage.

Table 6. Production, Shipments, Inventories and Imports of Dehydrated Alfalfa, Clover and Grass Meals:

The production and shipments recorded in this table are compiled from information received from operators of Dehydrated Alfalfa Meal plants in Canada, (see page 25 of the January report for the list of contributors).

Imports are compiled by the External Trade Division from custom invoices and are the latest available.

SHIPMENTS OF PREPARED STOCK AND POULTRY FEEDS

The information presented in this report is arranged as follows:

Table 1. Shipments of Stock and Poultry Feeds:

The estimated shipments of premixes and concentrates, complete and other feeds, as given in columns 1, 2, 3, 4, and 5 are derived from analysis presented in Tables 2, 3, 4 and 5 following. The basis for this shipments detail is further explained in these respective sections. The purpose of Table 1 is to provide industry and other interested persons with anticipated trends in the manufactured Feeds field.

Table 2. Shipments of Premixes and Concentrates:

These are the average shipments of premixes and concentrated feeds, by type and geographical destination, as reported monthly by primary manufacturers direct to the Bureau. They include premixes and concentrates moving into the hands of secondary or franchise operators (if any) as well as similar commodities moving direct to the farm level.

Table 3. Estimated Feed Potential from Premixes and Concentrated Feeds:

The data in this table represents the total finished feed equivalent available from the volume of premixes and concentrated feeds reported by manufactures in Table 2. The estimate of potential feeds has been supplied by reporting establishments and eliminates the use of factors as previously employed by the Bureau. The resulting estimate should prove more useful since reported data will readily reflect the change in industry activity.

Table 4. Shipments of Secondary or Complete Feeds:

The detail of feeds in this section represent the total secondary or finished feeds manufactured from raw ingredients (as opposed to those which use premixes or concentrates). This data is also reported directly by manufacturers of such products and is provided geographically by destination. The total volume of complete or finished feed is provided in Table 1, Section "B". However, provincial volumes may also be determined by the addition of volumes available in Table 3 and 4.

Table 5. Shipments of Other Animal Feeds:

With the exception of scratch grain feeds and chopped ground or crushed grain feeds, all commodities are tabulated as reported by manufactures. Shipments of scratch grain feed and chopped ground or crushed grain feeds are collected from a sample group of manufacturers and these have been extended to represent total coverage.

Table 6. Production, Shipments, Inventories and Imports of Dehydrated Alfalfa, Clover and Grass Meals:

The production and shipments recorded in this table are compiled from information received from operators of Dehydrated Alfalfa Meal plants in Canada, (see page 25 of the January report for the list of contributors).

Imports are compiled by the External Trade Division from custom invoices and are the latest available.

SHIPMENTS OF PREPARED STOCK AND POULTRY FEEDS

The information presented in this report is arranged as follows:

Table 1. Shipments of Stock and Poultry Feeds:

The estimated shipments of premixes and concentrates, complete and other feeds, as given in columns 1, 2, 3, 4, and 5 are derived from analysis presented in Tables 2, 3, 4 and 5 following. The basis for this shipments detail is further explained in these respective sections. The purpose of Table 1 is to provide industry and other interested persons with anticipated trends in the manufactured Feeds field.

Table 2. Shipments of Premixes and Concentrates:

These are the average shipments of premixes and concentrated feeds, by type and geographical destination, as reported monthly by primary manufacturers direct to the Bureau. They include premixes and concentrates moving into the hands of secondary or franchise operators (if any) as well as similar commodities moving direct to the farm level.

Table 3. Estimated Feed Potential from Premixes and Concentrated Feeds:

The data in this table represents the total finished feed equivalent available from the volume of premixes and concentrated feeds reported by manufacturers in Table 2. The estimate of potential feeds has been supplied by reporting establishments and eliminates the use of factors as previously employed by the Bureau. The resulting estimate should prove more useful since reported data will readily reflect the change in industry activity.

Table 4. Shipments of Secondary or Complete Feeds:

The detail of feeds in this section represent the total secondary or finished feeds manufactured from raw ingredients (as opposed to those which use premixes or concentrates). This data is also reported directly by manufacturers of such products and is provided geographically by destination. The total volume of complete or finished feed is provided in Table 1, Section "B". However, provincial volumes may also be determined by the addition of volumes available in Table 3 and 4.

Table 5. Shipments of Other Animal Feeds:

With the exception of scratch grain feeds and chopped ground or crushed grain feeds, all commodities are tabulated as reported by manufacturers. Shipments of scratch grain feed and chopped ground or crushed grain feeds are collected from a sample group of manufacturers and these have been extended to represent total coverage.

Table 6. Production, Shipments, Inventories and Imports of Dehydrated Alfalfa, Clover and Grass Meals:

The production and shipments recorded in this table are compiled from information received from operators of Dehydrated Alfalfa Meal plants in Canada, (see page 25 of the January report for the list of contributors).

Imports are compiled by the External Trade Division from custom invoices and are the latest available.

SHIPMENTS OF PREPARED STOCK AND POULTRY FEEDS

The information presented in this report is arranged as follows:

Table 1. Shipments of Stock and Poultry Feeds:

The estimated shipments of premixes and concentrates, complete and other feeds, as given in columns 1, 2, 3, 4, and 5 are derived from analysis presented in Tables 2, 3, 4 and 5 following. The basis for this shipments detail is further explained in these respective sections. The purpose of Table 1 is to provide industry and other interested persons with anticipated trends in the manufactured Feeds field.

Table 2. Shipments of Premixes and Concentrates:

These are the average shipments of premixes and concentrated feeds, by type and geographical destination, as reported monthly by primary manufacturers direct to the Bureau. They include premixes and concentrates moving into the hands of secondary or franchise operators (if any) as well as similar commodities moving direct to the farm level.

Table 3. Estimated Feed Potential from Premixes and Concentrated Feeds:

The data in this table represents the total finished feed equivalent available from the volume of premixes and concentrated feeds reported by manufactures in Table 2. The estimate of potential feeds has been supplied by reporting establishments and eliminates the use of factors as previously employed by the Bureau. The resulting estimate should prove more useful since reported data will readily reflect the change in industry activity.

Table 4. Shipments of Secondary or Complete Feeds:

The detail of feeds in this section represent the total secondary or finished feeds manufactured from raw ingredients (as opposed to those which use premixes or concentrates). This data is also reported directly by manufacturers of such products and is provided geographically by destination. The total volume of complete or finished feed is provided in Table 1, Section "B". However, provincial volumes may also be determined by the addition of volumes available in Table 3 and 4.

Table 5. Shipments of Other Animal Feeds:

With the exception of scratch grain feeds and chopped ground or crushed grain feeds, all commodities are tabulated as reported by manufactures. Shipments of scratch grain feed and chopped ground or crushed grain feeds are collected from a sample group of manufacturers and these have been extended to represent total coverage.

Table 6. Production, Shipments, Inventories and Imports of Dehydrated Alfalfa, Clover and Grass Meals:

The production and shipments recorded in this table are compiled from information received from operators of Dehydrated Alfalfa Meal plants in Canada, (see page 25 of the January report for the list of contributors).

Imports are compiled by the External Trade Division from custom invoices and are the latest available.

Table 1. Shipments of Stock and Poultry Feeds:

The estimated shipments of premixes and concentrates, complete and other feeds, as given in columns 1, 2, 3, 4, and 5 are derived from analysis presented in Tables 2, 3, 4 and 5 following. The basis for this shipments detail is further explained in these respective sections. The purpose of Table 1 is to provide industry and other interested persons with anticipated trends in the manufactured Feeds field.

Table 2. Shipments of Premixes and Concentrates:

These are the average shipments of premixes and concentrated feeds, by type and geographical destination, as reported monthly by primary manufacturers direct to the Bureau. They include premixes and concentrates moving into the hands of secondary or franchise operators (if any) as well as similar commodities moving direct to the farm level.

Table 3. Estimated Feed Potential from Premixes and Concentrated Feeds:

The data in this table represents the total finished feed equivalent available from the volume of premixes and concentrated feeds reported by manufactures in Table 2. The estimate of potential feeds has been supplied by reporting establishments and eliminates the use of factors as previously employed by the Bureau. The resulting estimate should prove more useful since reported data will readily reflect the change in industry activity.

Table 4. Shipments of Secondary or Complete Feeds:

The detail of feeds in this section represent the total secondary or finished feeds manufactured from raw ingredients (as opposed to those which use premixes or concentrates). This data is also reported directly by manufacturers of such products and is provided geographically by destination. The total volume of complete or finished feed is provided in Table 1, Section "B". However, provincial volumes may also be determined by the addition of volumes available in Table 3 and 4.

Table 5. Shipments of Other Animal Feeds:

With the exception of scratch grain feeds and chopped ground or crushed grain feeds, all commodities are tabulated as reported by manufactures. Shipments of scratch grain feed and chopped ground or crushed grain feeds are collected from a sample group of manufacturers and these have been extended to represent total coverage.

Table 6. Production, Shipments, Inventories and Imports of Dehydrated Alfalfa, Clover and Grass Meals:

The production and shipments recorded in this table are compiled from information received from operators of Dehydrated Alfalfa Meal plants in Canada, (see page 25 of the January report for the list of contributors).

Imports are compiled by the External Trade Division from custom invoices and are the latest available.

SHIPMENTS OF PREPARED STOCK AND POULTRY FEEDS

The information presented in this report is arranged as follows:

Table 1. Shipments of Stock and Poultry Feeds:

The estimated shipments of premixes and concentrates, complete and other feeds, as given in columns 1, 2, 3, 4, and 5 are derived from analysis presented in Tables 2, 3, 4 and 5 following. The basis for this shipments detail is further explained in these respective sections. The purpose of Table 1 is to provide industry and other interested persons with anticipated trends in the manufactured Feeds field.

Table 2. Shipments of Premixes and Concentrates:

These are the average shipments of premixes and concentrated feeds, by type and geographical destination, as reported monthly by primary manufacturers direct to the Bureau. They include premixes and concentrates moving into the hands of secondary or franchise operators (if any) as well as similar commodities moving direct to the farm level.

Table 3. Estimated Feed Potential from Premixes and Concentrated Feeds:

The data in this table represents the total finished feed equivalent available from the volume of premixes and concentrated feeds reported by manufactures in Table 2. The estimate of potential feeds has been supplied by reporting establishments and eliminates the use of factors as previously employed by the Bureau. The resulting estimate should prove more useful since reported data will readily reflect the change in industry activity.

Table 4. Shipments of Secondary or Complete Feeds:

The detail of feeds in this section represent the total secondary or finished feeds manufactured from raw ingredients (as opposed to those which use premixes or concentrates). This data is also reported directly by manufacturers of such products and is provided geographically by destination. The total volume of complete or finished feed is provided in Table 1, Section "B". However, provincial volumes may also be determined by the addition of volumes available in Table 3 and 4.

Table 5. Shipments of Other Animal Feeds:

With the exception of scratch grain feeds and chopped ground or crushed grain feeds, all commodities are tabulated as reported by manufactures. Shipments of scratch grain feed and chopped ground or crushed grain feeds are collected from a sample group of manufacturers and these have been extended to represent total coverage.

Table 6. Production, Shipments, Inventories and Imports of Dehydrated Alfalfa, Clover and Grass Meals:

The production and shipments recorded in this table are compiled from information received from operators of Dehydrated Alfalfa Meal plants in Canada, (see page 25 of the January report for the list of contributors).

Imports are compiled by the External Trade Division from custom invoices and are the latest available.

SHIPMENTS OF PREPARED STOCK AND POULTRY FEEDS

The information presented in this report is arranged as follows:

Table 1. Shipments of Stock and Poultry Feeds:

The estimated shipments of premixes and concentrates, complete and other feeds, as given in columns 1, 2, 3, 4, and 5 are derived from analysis presented in Tables 2, 3, 4 and 5 following. The basis for this shipments detail is further explained in these respective sections. The purpose of Table 1 is to provide industry and other interested persons with anticipated trends in the manufactured Feeds field.

Table 2. Shipments of Premixes and Concentrates:

These are the average shipments of premixes and concentrated feeds, by type and geographical destination, as reported monthly by primary manufacturers direct to the Bureau. They include premixes and concentrates moving into the hands of secondary or franchise operators (if any) as well as similar commodities moving direct to the farm level.

Table 3. Estimated Feed Potential from Premixes and Concentrated Feeds:

The data in this table represents the total finished feed equivalent available from the volume of premixes and concentrated feeds reported by manufactures in Table 2. The estimate of potential feeds has been supplied by reporting establishments and eliminates the use of factors as previously employed by the Bureau. The resulting estimate should prove more useful since reported data will readily reflect the change in industry activity.

Table 4. Shipments of Secondary or Complete Feeds:

The detail of feeds in this section represent the total secondary or finished feeds manufactured from raw ingredients (as opposed to those which use premixes or concentrates). This data is also reported directly by manufacturers of such products and is provided geographically by destination. The total volume of complete or finished feed is provided in Table 1, Section "B". However, provincial volumes may also be determined by the addition of volumes available in Table 3 and 4.

Table 5. Shipments of Other Animal Feeds:

With the exception of scratch grain feeds and chopped ground or crushed grain feeds, all commodities are tabulated as reported by manufactures. Shipments of scratch grain feed and chopped ground or crushed grain feeds are collected from a sample group of manufacturers and these have been extended to represent total coverage.

Table 6. Production, Shipments, Inventories and Imports of Dehydrated Alfalfa, Clover and Grass Meals:

The production and shipments recorded in this table are compiled from information received from operators of Dehydrated Alfalfa Meal plants in Canada, (see page 25 of the January report for the list of contributors).

Imports are compiled by the External Trade Division from custom invoices and are the latest available.

SHIPMENTS OF PREPARED STOCK AND POULTRY FEEDS

The information presented in this report is arranged as follows:

Table 1. Shipments of Stock and Poultry Feeds:

The estimated shipments of premixes and concentrates, complete and other feeds, as given in columns 1, 2, 3, 4, and 5 are derived from analysis presented in Tables 2, 3, 4 and 5 following. The basis for this shipments detail is further explained in these respective sections. The purpose of Table 1 is to provide industry and other interested persons with anticipated trends in the manufactured feeds field.

Table 2. Shipments of Premixes and Concentrates:

These are the average shipments of premixes and concentrated feeds, by type and geographical destination, as reported monthly by primary manufacturers direct to the Bureau. They include premixes and concentrates moving into the hands of secondary or franchise operators (if any) as well as similar commodities moving direct to the farm level.

Table 3. Estimated Feed Potential from Premixes and Concentrated Feeds:

The data in this table represents the total finished feed equivalent available from the volume of premixes and concentrated feeds reported by manufactures in Table 2. The estimate of potential feeds has been supplied by reporting establishments and eliminates the use of factors as previously employed by the Bureau. The resulting estimate should prove more useful since reported data will readily reflect the change in industry activity.

Table 4. Shipments of Secondary or Complete Feeds:

The detail of feeds in this section represent the total secondary or finished feeds manufactured from raw ingredients (as opposed to those which use premixes or concentrates). This data is also reported directly by manufacturers of such products and is provided geographically by destination. The total volume of complete or finished feed is provided in Table 1, Section "B". However, provincial volumes may also be determined by the addition of volumes available in Table 3 and 4.

Table 5. Shipments of Other Animal Feeds:

With the exception of scratch grain feeds and chopped ground or crushed grain feeds, all commodities are tabulated as reported by manufactures. Shipments of scratch grain feed and chopped ground or crushed grain feeds are collected from a sample group of manufacturers and these have been extended to represent total coverage.

Table 6. Production, Shipments, Inventories and Imports of Dehydrated Alfalfa, Clover and Grass Meals:

The production and shipments recorded in this table are compiled from information received from operators of Dehydrated Alfalfa Meal plants in Canada, (see page 31 of the January report for the list of contributors).

Imports are compiled by the External Trade Division from custom invoices and are the latest available.

SHIPMENTS OF PREPARED STOCK AND POULTRY FEEDS

The information presented in this report is arranged as follows:

Table 1. Shipments of Stock and Poultry Feeds:

The estimated shipments of premixes and concentrates, complete and other feeds, as given in columns 1, 2, 3, 4 and 5 are derived from analysis presented in Tables 2, 3, 4 and 5 following. The basis for this shipments detail is further explained in these respective sections. The purpose of Table 1 is to provide industry and other interested persons with anticipated trends in the manufactured Feeds field.

Table 2. Shipments of Premixes and Concentrates:

These are the average shipments of premixes and concentrated feeds, by type and geographical destination, as reported monthly by primary manufacturers direct to the Bureau. They include premixes and concentrates moving into the hands of secondary or franchise operators (if any) as well as similar commodities moving direct to the farm level.

Table 3. Estimated Feed Potential from Premixes and Concentrated Feeds:

The data in this table represents the total finished feed equivalent available from the volume of premixes and concentrated feeds reported by manufactures in Table 2. The estimate of potential feeds has been supplied by reporting establishments and eliminates the use of factors as previously employed by the Bureau. The resulting estimate should prove more useful since reported data will readily reflect the change in industry activity.

Table 4. Shipments of Secondary or Complete Feeds:

The detail of feeds in this section represent the total secondary or finished feeds manufactured from raw ingredients (as opposed to those which use premixes or concentrates). This data is also reported directly by manufacturers of such products and is provided geographically by destination. The total volume of complete or finished feed is provided in Table 1, Section "B". However, provincial volumes may also be determined by the addition of volumes available in Table 3 and 4.

Table 5. Shipments of Other Animal Feeds:

With the exception of scratch grain feeds and chopped ground or crushed grain feeds, all commodities are tabulated as reported by manufactures. Shipments of scratch grain feed and chopped ground or crushed grain feeds are collected from a sample group of manufacturers and these have been extended to represent total coverage.

Table 6. Production, Shipments, Inventories and Imports of Dehydrated Alfalfa, Clover and Grass Meals:

The production and shipments recorded in this table are compiled from information received from operators of Dehydrated Alfalfa Meal plants in Canada, (see page 31 of the January report for the list of contributors).

Imports are compiled by the External Trade Division from custom invoices and are the latest available.

SHIPMENTS OF PREPARED STOCK AND POULTRY FEEDS

The information presented in this report is arranged as follows:

Table 1. Shipments of Stock and Poultry Feeds:

The estimated shipments of premixes and concentrates, complete and other feeds, as given in columns 1, 2, 3, 4 and 5 are derived from analysis presented in Tables 2, 3, 4 and 5 following. The basis for this shipments detail is further explained in these respective sections. The purpose of Table 1 is to provide industry and other interested persons with anticipated trends in the manufactured Feeds field.

Table 2. Shipments of Premixes and Concentrates:

These are the average shipments of premixes and concentrated feeds, by type and geographical destination, as reported monthly by primary manufacturers direct to the Bureau. They include premixes and concentrates moving into the hands of secondary or franchise operators (if any) as well as similar commodities moving direct to the farm level.

Table 3. Estimated Feed Potential from Premixes and Concentrated Feeds:

The data in this table represents the total finished feed equivalent available from the volume of premixes and concentrated feeds reported by manufactures in Table 2. The estimate of potential feeds has been supplied by reporting establishments and eliminates the use of factors as previously employed by the Bureau. The resulting estimate should prove more useful since reported data will readily reflect the change in industry activity.

Table 4. Shipments of Secondary or Complete Feeds:

The detail of feeds in this section represent the total secondary or finished feeds manufactured from raw ingredients (as opposed to those which use premixes or concentrates). This data is also reported directly by manufacturers of such products and is provided geographically by destination. The total volume of complete or finished feed is provided in Table 1, Section "B". However, provincial volumes may also be determined by the addition of volumes available in Table 3 and 4.

Table 5. Shipments of Other Animal Feeds:

With the exception of scratch grain feeds and chopped ground or crushed grain feeds, all commodities are tabulated as reported by manufactures. Shipments of scratch grain feed and chopped ground or crushed grain feeds are collected from a sample group of manufacturers and these have been extended to represent total coverage.

Table 6. Production, Shipments, Inventories and Imports of Dehydrated Alfalfa, Clover and Grass Meals:

The production and shipments recorded in this table are compiled from information received from operators of Dehydrated Alfalfa Meal plants in Canada, (see page 31 of the January report for the list of contributors).

Imports are compiled by the External Trade Division from custom invoices and are the latest available.

SHIPMENTS OF PREPARED STOCK AND POULTRY FEEDS

The information presented in this report is arranged as follows:

Table 1. Shipments of Stock and Poultry Feeds:

The estimated shipments of premixes and concentrates, complete and other feeds, as given in columns 1, 2, 3, 4 and 5 are derived from analysis presented in Tables 2, 3, 4 and 5 following. The basis for this shipments detail is further explained in these respective sections. The purpose of Table 1 is to provide industry and other interested persons with anticipated trends in the manufactured Feeds field.

Table 2. Shipments of Premixes and Concentrates:

These are the average shipments of premixes and concentrated feeds, by type and geographical destination, as reported monthly by primary manufacturers direct to the Bureau. They include premixes and concentrates moving into the hands of secondary or franchise operators (if any) as well as similar commodities moving direct to the farm level.

Table 3. Estimated Feed Potential from Premixes and Concentrated Feeds:

The data in this table represents the total finished feed equivalent available from the volume of premixes and concentrated feeds reported by manufactures in Table 2. The estimate of potential feeds has been supplied by reporting establishments and eliminates the use of factors as previously employed by the Bureau. The resulting estimate should prove more useful since reported data will readily reflect the change in industry activity.

Table 4. Shipments of Secondary or Complete Feeds:

The detail of feeds in this section represent the total secondary or finished feeds manufactured from raw ingredients (as opposed to those which use premixes or concentrates). This data is also reported directly by manufacturers of such products and is provided geographically by destination. The total volume of complete or finished feed is provided in Table 1, Section "B". However, provincial volumes may also be determined by the addition of volumes available in Table 3 and 4.

Table 5. Shipments of Other Animal Feeds:

With the exception of scratch grain feeds and chopped ground or crushed grain feeds, all commodities are tabulated as reported by manufactures. Shipments of scratch grain feed and chopped ground or crushed grain feeds are collected from a sample group of manufacturers and these have been extended to represent total coverage.

Table 6. Production, Shipments, Inventories and Imports of Dehydrated Alfalfa, Clover and Grass Meals:

The production and shipments recorded in this table are compiled from information received from operators of Dehydrated Alfalfa Meal plants in Canada, (see page 31 of the January report for the list of contributors).

Imports are compiled by the External Trade Division from custom invoices and are the latest available.

SHIPMENTS OF PREPARED STOCK AND POULTRY FEEDS

The information presented in this report is arranged as follows:

Table 1. Shipments of Stock and Poultry Feeds:

The estimated shipments of premixes and concentrates, complete and other feeds, as given in columns 1, 2, 3, 4, and 5 are derived from analysis presented in Tables 2, 3, 4 and 5 following. The basis for this shipments detail is further explained in these respective sections. The purpose of Table 1 is to provide industry and other interested persons with anticipated trends in the manufactured Feeds field.

Table 2. Shipments of Premixes and Concentrates:

These are the average shipments of premixes and concentrated feeds, by type and geographical destination, as reported monthly by primary manufacturers direct to the Bureau. They include premixes and concentrates moving into the hands of secondary or franchise operators (if any) as well as similar commodities moving direct to the farm level.

Table 3. Estimated Feed Potential from Premixes and Concentrated Feeds:

The data in this table represents the total finished feed equivalent available from the volume of premixes and concentrated feeds reported by manufactures in Table 2. The estimate of potential feeds has been supplied by reporting establishments and eliminates the use of factors as previously employed by the Bureau. The resulting estimate should prove more useful since reported data will readily reflect the change in industry activity.

Table 4. Shipments of Secondary or Complete Feeds:

The detail of feeds in this section represent the total secondary or finished feeds manufactured from raw ingredients (as opposed to those which use premixes or concentrates). This data is also reported directly by manufacturers of such products and is provided geographically by destination. The total volume of complete or finished feed is provided in Table 1, Section "B". However, provincial volumes may also be determined by the addition of volumes available in Table 3 and 4.

Table 5. Shipments of Other Animal Feeds:

With the exception of scratch grain feeds and chopped ground or crushed grain feeds, all commodities are tabulated as reported by manufactures. Shipments of scratch grain feed and chopped ground or crushed grain feeds are collected from a sample group of manufacturers and these have been extended to represent total coverage.

Table 6. Production, Shipments, Inventories and Imports of Dehydrated Alfalfa, Clover and Grass Meals:

The production and shipments recorded in this table are compiled from information received from operators of Dehydrated Alfalfa Meal plants in Canada, (see page 31 of the January report for the list of contributors).

Imports are compiled by the External Trade Division from custom invoices and are the latest available.

SHIPMENTS OF PREPARED STOCK AND POULTRY FEEDS

The information presented in this report is arranged as follows:

Table 1. Shipments of Stock and Poultry Feeds:

The estimated shipments of premixes and concentrates, complete and other feeds, as given in columns 1, 2, 3, 4 and 5 are derived from analysis presented in Tables 2, 3, 4 and 5 following. The basis for this shipments detail is further explained in these respective sections. The purpose of Table 1 is to provide industry and other interested persons with anticipated trends in the manufactured Feeds field.

Table 2. Shipments of Premixes and Concentrates:

These are the average shipments of premixes and concentrated feeds, by type and geographical destination, as reported monthly by primary manufacturers direct to the Bureau. They include premixes and concentrates moving into the hands of secondary or franchise operators (if any) as well as similar commodities moving direct to the farm level.

Table 3. Estimated Feed Potential from Premixes and Concentrated Feeds:

The data in this table represents the total finished feed equivalent available from the volume of premixes and concentrated feeds reported by manufactures in Table 2. The estimate of potential feeds has been supplied by reporting establishments and eliminates the use of factors as previously employed by the Bureau. The resulting estimate should prove more useful since reported data will readily reflect the change in industry activity.

Table 4. Shipments of Secondary or Complete Feeds:

The detail of feeds in this section represent the total secondary or finished feeds manufactured from raw ingredients (as opposed to those which use premixes or concentrates). This data is also reported directly by manufacturers of such products and is provided geographically by destination. The total volume of complete or finished feed is provided in Table 1, Section "B". However, provincial volumes may also be determined by the addition of volumes available in Table 3 and 4.

Table 5. Shipments of Other Animal Feeds:

With the exception of scratch grain feeds and chopped ground or crushed grain feeds, all commodities are tabulated as reported by manufactures. Shipments of scratch grain feed and chopped ground or crushed grain feeds are collected from a sample group of manufacturers and these have been extended to represent total coverage.

Table 6. Production, Shipments, Inventories and Imports of Dehydrated Alfalfa, Clover and Grass Meals:

The production and shipments recorded in this table are compiled from information received from operators of Dehydrated Alfalfa Meal plants in Canada, (see page 31 of the January report for the list of contributors).

Imports are compiled by the External Trade Division from custom invoices and are the latest available.

SHIPMENTS OF PREPARED STOCK AND POULTRY FEEDS

The information presented in this report is arranged as follows:

Table 1. Shipments of Stock and Poultry Feeds:

The estimated shipments of premixes and concentrates, complete and other feeds, as given in columns 1, 2, 3, 4, and 5 are derived from analysis presented in Tables 2, 3, 4 and 5 following. The basis for this shipments detail is further explained in these respective sections. The purpose of Table 1 is to provide industry and other interested persons with anticipated trends in the manufactured Feeds field.

Table 2. Shipments of Premixes and Concentrates:

These are the average shipments of premixes and concentrated feeds, by type and geographical destination, as reported monthly by primary manufacturers direct to the Bureau. They include premixes and concentrates moving into the hands of secondary or franchise operators (if any) as well as similar commodities moving direct to the farm level.

Table 3. Estimated Feed Potential from Premixes and Concentrated Feeds:

The data in this table represents the total finished feed equivalent available from the volume of premixes and concentrated feeds reported by manufactures in Table 2. The estimate of potential feeds has been supplied by reporting establishments and eliminates the use of factors as previously employed by the Bureau. The resulting estimate should prove more useful since reported data will readily reflect the change in industry activity.

Table 4. Shipments of Secondary or Complete Feeds:

The detail of feeds in this section represent the total secondary or finished feeds manufactured from raw ingredients (as opposed to those which use premixes or concentrates). This data is also reported directly by manufacturers of such products and is provided geographically by destination. The total volume of complete or finished feed is provided in Table 1, Section "B". However, provincial volumes may also be determined by the addition of volumes available in Table 3 and 4.

Table 5. Shipments of Other Animal Feeds:

With the exception of scratch grain feeds and chopped ground or crushed grain feeds, all commodities are tabulated as reported by manufactures. Shipments of scratch grain feed and chopped ground or crushed grain feeds are collected from a sample group of manufacturers and these have been extended to represent total coverage.

Table 6. Production, Shipments, Inventories and Imports of Dehydrated Alfalfa, Clover and Grass Meals:

The production and shipments recorded in this table are compiled from information received from operators of Dehydrated Alfalfa Meal plants in Canada, (see page 31 of the January report for the list of contributors).

Imports are compiled by the External Trade Division from custom invoices and are the latest available.

SHIPMENTS OF PREPARED STOCK AND POULTRY FEEDS

The information presented in this report is arranged as follows:

Table 1. Shipments of Stock and Poultry Feeds:

The estimated shipments of premixes and concentrates, complete and other feeds, as given in columns 1, 2, 3, 4 and 5 are derived from analysis presented in Tables 2, 3, 4 and 5 following. The basis for this shipments detail is further explained in these respective sections. The purpose of Table 1 is to provide industry and other interested persons with anticipated trends in the manufactured Feeds field.

Table 2. Shipments of Premixes and Concentrates:

These are the average shipments of premixes and concentrated feeds, by type and geographical destination, as reported monthly by primary manufacturers direct to the Bureau. They include premixes and concentrates moving into the hands of secondary or franchise operators (if any) as well as similar commodities moving direct to the farm level.

Table 3. Estimated Feed Potential from Premixes and Concentrated Feeds:

The data in this table represents the total finished feed equivalent available from the volume of premixes and concentrated feeds reported by manufactures in Table 2. The estimate of potential feeds has been supplied by reporting establishments and eliminates the use of factors as previously employed by the Bureau. The resulting estimate should prove more useful since reported data will readily reflect the change in industry activity.

Table 4. Shipments of Secondary or Complete Feeds:

The detail of feeds in this section represent the total secondary or finished feeds manufactured from raw ingredients (as opposed to those which use premixes or concentrates). This data is also reported directly by manufacturers of such products and is provided geographically by destination. The total volume of complete or finished feed is provided in Table 1, Section "B". However, provincial volumes may also be determined by the addition of volumes available in Table 3 and 4.

Table 5. Shipments of Other Animal Feeds:

With the exception of scratch grain feeds and chopped ground or crushed grain feeds, all commodities are tabulated as reported by manufactures. Shipments of scratch grain feed and chopped ground or crushed grain feeds are collected from a sample group of manufacturers and these have been extended to represent total coverage.

Table 6. Production, Shipments, Inventories and Imports of Dehydrated Alfalfa, Clover and Grass Meals:

The production and shipments recorded in this table are compiled from information received from operators of Dehydrated Alfalfa Meal plants in Canada, (see page 31 of the January report for the list of contributors).

Imports are compiled by the External Trade Division from custom invoices and are the latest available.

SHIPMENTS OF PREPARED STOCK AND POULTRY FEEDS

The information presented in this report is arranged as follows:

Table 1. Shipments of Stock and Poultry Feeds:

The estimated shipments of premixes and concentrates, complete and other feeds, as given in columns 1, 2, 3, 4 and 5 are derived from analysis presented in Tables 2, 3, 4 and 5 following. The basis for this shipments detail is further explained in these respective sections. The purpose of Table 1 is to provide industry and other interested persons with anticipated trends in the manufactured Feeds field.

Table 2. Shipments of Premixes and Concentrates:

These are the average shipments of premixes and concentrated feeds, by type and geographical destination, as reported monthly by primary manufacturers direct to the Bureau. They include premixes and concentrates moving into the hands of secondary or franchise operators (if any) as well as similar commodities moving direct to the farm level.

Table 3. Estimated Feed Potential from Premixes and Concentrated Feeds:

The data in this table represents the total finished feed equivalent available from the volume of premixes and concentrated feeds reported by manufactures in Table 2. The estimate of potential feeds has been supplied by reporting establishments and eliminates the use of factors as previously employed by the Bureau. The resulting estimate should prove more useful since reported data will readily reflect the change in industry activity.

Table 4. Shipments of Secondary or Complete Feeds:

The detail of feeds in this section represent the total secondary or finished feeds manufactured from raw ingredients (as opposed to those which use premixes or concentrates). This data is also reported directly by manufacturers of such products and is provided geographically by destination. The total volume of complete or finished feed is provided in Table 1, Section "B". However, provincial volumes may also be determined by the addition of volumes available in Table 3 and 4.

Table 5. Shipments of Other Animal Feeds:

With the exception of scratch grain feeds and chopped ground or crushed grain feeds, all commodities are tabulated as reported by manufactures. Shipments of scratch grain feed and chopped ground or crushed grain feeds are collected from a sample group of manufacturers and these have been extended to represent total coverage.

Table 6. Production, Shipments, Inventories and Imports of Dehydrated Alfalfa, Clover and Grass Meals:

The production and shipments recorded in this table are compiled from information received from operators of Dehydrated Alfalfa Meal plants in Canada, (see page 31 of the January report for the list of contributors).

Imports are compiled by the External Trade Division from custom invoices and are the latest available.

SHIPMENTS OF PREPARED STOCK AND POULTRY FEEDS

The information presented in this report is arranged as follows:

Table 1. Shipments of Stock and Poultry Feeds:

The estimated shipments of premixes and concentrates, complete and other feeds, as given in columns 1, 2, 3, 4 and 5 are derived from analysis presented in Tables 2, 3, 4 and 5 following. The basis for this shipments detail is further explained in these respective sections. The purpose of Table 1 is to provide industry and other interested persons with anticipated trends in the manufactured Feeds field.

Table 2. Shipments of Premixes and Concentrates:

These are the average shipments of premixes and concentrated feeds, by type and geographical destination, as reported monthly by primary manufacturers direct to the Bureau. They include premixes and concentrates moving into the hands of secondary or franchise operators (if any) as well as similar commodities moving direct to the farm level.

Table 3. Estimated Feed Potential from Premixes and Concentrated Feeds:

The data in this table represents the total finished feed equivalent available from the volume of premixes and concentrated feeds reported by manufactures in Table 2. The estimate of potential feeds has been supplied by reporting establishments and eliminates the use of factors as previously employed by the Bureau. The resulting estimate should prove more useful since reported data will readily reflect the change in industry activity.

Table 4. Shipments of Secondary or Complete Feeds:

The detail of feeds in this section represent the total secondary or finished feeds manufactured from raw ingredients (as opposed to those which use premixes or concentrates). This data is also reported directly by manufacturers of such products and is provided geographically by destination. The total volume of complete or finished feed is provided in Table 1, Section "B". However, provincial volumes may also be determined by the addition of volumes available in Table 3 and 4.

Table 5. Shipments of Other Animal Feeds:

With the exception of scratch grain feeds and chopped ground or crushed grain feeds, all commodities are tabulated as reported by manufactures. Shipments of scratch grain feed and chopped ground or crushed grain feeds are collected from a sample group of manufacturers and these have been extended to represent total coverage.

Table 6. Production, Shipments, Inventories and Imports of Dehydrated Alfalfa, Clover and Grass Meals:

The production and shipments recorded in this table are compiled from information received from operators of Dehydrated Alfalfa Meal plants in Canada, (see page 31 of the January report for the list of contributors).

Imports are compiled by the External Trade Division from custom invoices and are the latest available.

SHIPMENTS OF PREPARED STOCK AND POULTRY FEEDS

The information presented in this report is arranged as follows:

Table 1. Shipments of Stock and Poultry Feeds:

The estimated shipments of premixes and concentrates, complete and other feeds, as given in columns 1, 2, 3, 4, and 5 are derived from analysis presented in Tables 2, 3, 4 and 5 following. The basis for this shipments detail is further explained in these respective sections. The purpose of Table 1 is to provide industry and other interested persons with anticipated trends in the manufactured Feeds field.

Table 2. Shipments of Premixes and Concentrates:

These are the average shipments of premixes and concentrated feeds, by type and geographical destination, as reported monthly by primary manufacturers direct to the Bureau. They include premixes and concentrates moving into the hands of secondary or franchise operators (if any) as well as similar commodities moving direct to the farm level.

Table 3. Estimated Feed Potential from Premixes and Concentrated Feeds:

The data in this table represents the total finished feed equivalent available from the volume of premixes and concentrated feeds reported by manufactures in Table 2. The estimate of potential feeds has been supplied by reporting establishments and eliminates the use of factors as previously employed by the Bureau. The resulting estimate should prove more useful since reported data will readily reflect the change in industry activity.

Table 4. Shipments of Secondary or Complete Feeds:

The detail of feeds in this section represent the total secondary or finished feeds manufactured from raw ingredients (as opposed to those which use premixes or concentrates). This data is also reported directly by manufacturers of such products and is provided geographically by destination. The total volume of complete or finished feed is provided in Table 1, Section "B". However, provincial volumes may also be determined by the addition of volumes available in Table 3 and 4.

Table 5. Shipments of Other Animal Feeds:

With the exception of scratch grain feeds and chopped ground or crushed grain feeds, all commodities are tabulated as reported by manufactures. Shipments of scratch grain feed and chopped ground or crushed grain feeds are collected from a sample group of manufacturers and these have been extended to represent total coverage.

Table 6. Production, Shipments, Inventories and Imports of Dehydrated Alfalfa, Clover and Grass Meals:

The production and shipments recorded in this table are compiled from information received from operators of Dehydrated Alfalfa Meal plants in Canada, (see page 31 of the January report for the list of contributors).

Imports are compiled by the External Trade Division from custom invoices and are the latest available.

SHIPMENTS OF PREPARED STOCK AND POULTRY FEEDS

The information presented in this report is arranged as follows:

Table 1. Shipments of Stock and Poultry Feeds:

The estimated shipments of premixes and concentrates, complete and other feeds, as given in columns 1, 2, 3, 4, and 5 are derived from analysis presented in Tables 2, 3, 4 and 5 following. The basis for this shipments detail is further explained in these respective sections. The purpose of Table 1 is to provide industry and other interested persons with anticipated trends in the manufactured Feeds field.

Table 2. Shipments of Premixes and Concentrates:

These are the average shipments of premixes and concentrated feeds, by type and geographical destination, as reported monthly by primary manufacturers direct to the Bureau. They include premixes and concentrates moving into the hands of secondary or franchise operators (if any) as well as similar commodities moving direct to the farm level.

Table 3. Estimated Feed Potential from Premixes and Concentrated Feeds:

The data in this table represents the total finished feed equivalent available from the volume of premixes and concentrated feeds reported by manufactures in Table 2. The estimate of potential feeds has been supplied by reporting establishments and eliminates the use of factors as previously employed by the Bureau. The resulting estimate should prove more useful since reported data will readily reflect the change in industry activity.

Table 4. Shipments of Secondary or Complete Feeds:

The detail of feeds in this section represent the total secondary or finished feeds manufactured from raw ingredients (as opposed to those which use premixes or concentrates). This data is also reported directly by manufacturers of such products and is provided geographically by destination. The total volume of complete or finished feed is provided in Table 1, Section "B". However, provincial volumes may also be determined by the addition of volumes available in Table 3 and 4.

Table 5. Shipments of Other Animal Feeds:

With the exception of scratch grain feeds and chopped ground or crushed grain feeds, all commodities are tabulated as reported by manufactures. Shipments of scratch grain feed and chopped ground or crushed grain feeds are collected from a sample group of manufacturers and these have been extended to represent total coverage.

Table 6. Production, Shipments, Inventories and Imports of Dehydrated Alfalfa, Clover and Grass Meals:

The production and shipments recorded in this table are compiled from information received from operators of Dehydrated Alfalfa Meal plants in Canada, (see page 31 of the January report for the list of contributors).

Imports are compiled by the External Trade Division from custom invoices and are the latest available.
